

**C. AMENDMENTS TO THE CLAIMS**

In order to better assist the Examiner with the prosecution of the case, the current pending claims have been included in their entirety for which reconsideration is requested. Claims 4, 7, 19-21 are canceled herein. Claim 1 has been amended by incorporating claim 4.

**Claim 1 (AMENDED)** A computer program on a computer usable medium having computer readable program code means, comprising:

program code means for generating a user interface having means for receiving a specified application name, at least one specified search directory, at least one specified target directory which is a working directory of the specified named application, and at least one specified file descriptor; and

program code means for automatically populating the specified target directory with each file, from the at least one specified search directory, matching the specified file descriptor, when the specified named application is started.

**Claim 2 (Original)** The program of claim 1 wherein the means for automatically populating the specified target directory further comprises means for automatically moving each file, from the at least one specified search directory, matching the specified file descriptor, into the specified target directory when the specified named application is started.

**Claim 3 (Original)** The program of claim 1 wherein the means for automatically populating further comprises means for automatically copying each file, in the at least one specified search directory, matching the specified file descriptor, to the specified

AUS920010030US1

target directory when the specified named application is started.

**Claim 4 (CANCELED)**

**Claim 5 (Original)** The program of claim 2 further comprising program code means for moving back the automatically moved files to an originating directory of each moved file when the specified named application is ended.

**Claim 6 (Original)** The program of claim 1 wherein the file descriptor is at least one of a file mask and a general named description.

**Claim 7 (CANCELED).**

**Claim 8 (Original)** A method for enabling access, from one directory, a plurality of files originally residing in at least one other directory, the method comprising:

receiving a specification of the at least one other directory, at least one file descriptor, a specification of the one directory, and a specified application name;

automatically populating, when the specified named application is started, the specified one directory with each of the plurality of files, from one of the specified at least one other directory, matching the at least one file descriptor; and

enabling a user to have access to each of the plurality of files from the specified one directory when the specified named application is executing.

**Claim 9 (Original)** A method for enabling access, from one directory, to a plurality of files originally residing in at least one other directory, the method comprising:

AUS920010030US1

generating a selectable icon for a named application in conjunction with a programming tool;

displaying, from the programming tool, a graphical user interface having means for receiving a specification of the at least one other directory, at least one file descriptor, a specification of the one directory, and a specified application name;

automatically populating the specified one directory with each of the plurality of files, from one of the specified at least one other directory, matching the at least one file descriptor, and launching the named application, when the selectable icon is selected; and

accessing each of the plurality of files from the specified one directory when the specified named application is executing.

**Claim 10 (Original)** A computer system having means for enabling access, from one directory, to a plurality of files originally residing in at least one other directory, the computer system comprising:

a graphical user interface having means for receiving a specification of the at least one other directory, at least one file descriptor, a specification of the one directory, and a specified application name;

means for automatically populating, when the specified named application is started, the specified one directory with each of the plurality of files, from one of the specified at least one other directory, matching the at least one file descriptor; and

means for enabling a user to have access to each of the plurality of files from the specified one directory when the specified named application is executing.

**Claim 11 (Original)** The computer system of claim 10 wherein the means for populating further comprises means for moving each of the plurality of files, from one of the specified at least one other directory, matching the at least one file descriptor, to the specified one directory.

**Claim 12 (Original)** The computer system of claim 11 further comprising means for moving back each of the moved files to each one of the specified at least one other directory.

**Claim 13 (Original)** The computer system of claim 12 wherein each of the moved files are moved back when a second application, different from the specified named application, is launched.

**Claim 14 (Original)** The computer system of claim 12 wherein the moved files are moved back when the specified named application is closed.

**Claim 15 (Original)** The computer system of claim 10 wherein the specified one directory is a working directory of the specified named application.

**Claim 16 (Original)** The computer system of claim 10 wherein the means for populating further comprises means for copying each of the plurality of files, at one of the specified at least one other directory, matching the at least one file descriptor, to the specified one directory.

**Claim 17 (Original)** A computer system having means for enabling access, from one  
AUS920010030US1

directory, to a plurality of files originally residing in at least one other directory, the computer system comprising:

means for generating a selectable icon for a named application in conjunction with a programming tool;

means for displaying, from the programming tool, a graphical user interface having means for receiving a specification of the at least one other directory, at least one file descriptor, a specification of the one directory, and a specified application name;

means for automatically populating the specified one directory with each of the plurality of files, from one of the specified at least one other directory, matching the at least one file descriptor, and launching the named application, when the selectable icon is selected; and

means for accessing each of the plurality of files from the specified one directory when the specified named application is executing.

Claim 18 (Original) A computer system having means for enabling access, from one directory, to a plurality of files originally residing in at least one other directory accessible to the computer system, the computer system comprising:

a software program tool having means for displaying a graphical user interface having means for receiving a specification of the at least one other directory, at least one file descriptor, a specification of the one directory, and a specified application name;

an application having the specified application name;

means for invoking the software program tool to automatically populate the specified one directory with each of the plurality of files, from one of the specified at least one other directory, matching the at least one file descriptor, each time the named application is launched; and

means for accessing each of the plurality of files from the specified one directory when the specified named application is executing.

Claim 19 (CANCELED)

Claim 20 (CANCELED)

Claim 21 (CANCELED)
